ALFIDO TECH INTERNSHIP

Task 2: Console-Based Mini Project

Submitted By: Pravallika Eichapuram
Internship: Java Developer Internship
Task Number: 2
Date: 06 July 2026

Objective :

The objective of this task is to develop a console-based Java application using Scanner for user input. The program demonstrates loops, conditional statements, and basic Java programming concepts through a Student Management System.

Programs Implemented :

Student Management System

Description :

This application allows users to manage student information using a console interface. It accepts user input using the Scanner class and demonstrates loops and conditional logic.

Features :

- Uses Scanner for user input
- Uses loops
- Uses if-else conditions
- Console-based application
- Displays student details

Source Code :

```
StudentSystem.java ×
StudentSystem.java
import java.util.Scanner;

public class StudentSystem {
        Run | Debug
        public static void main(String[] args) {
            Scanner sc = new Scanner(System.in);

            // Arrays to store student data
            String[] names = new String[5];
            int[] marks = new int[5];
            int studentCount = 0;

            System.out.println(x: "--- Welcome to Student Management System ---");

            while (true) {
                System.out.println(x: "\n1. Add Student");
                System.out.println(x: "2. Display All Students");
                System.out.println(x: "3. Exit");
                System.out.print(s: "Enter your choice: ");

                int choice = sc.nextInt();
                sc.nextLine(); // Consume newline

                if (choice == 1){
                    if (studentCount < 5) {
                        System.out.print(s: "Enter Student Name: ");
                        names[studentCount] = sc.nextLine();

                        System.out.print(s: "Enter Marks: ");
                        marks[studentCount] = sc.nextInt();
                        sc.nextLine(); // IMPORTANT FIX

                        studentCount++;
                        System.out.println(x: "Student added successfully!");
                    } else {
                        System.out.println(x: "System Full! Cannot add more students.");
                    }
                }
```

```
StudentSystem.java ×
StudentSystem.java
public class StudentSystem {
    public static void main(String[] args) {
                else if (choice == 2) {
                    if (studentCount == 0) {
                        System.out.println(x: "No records found.");
                    } else {
                        System.out.println(x: "\n--- Student Records ---");
                        for (int i = 0; i < studentCount; i++) {
                            String result = (marks[i] >= 35) ? "Pass" : "Fail";
                            System.out.println("Name: " + names[i] +
                                                   " | Marks: " + marks[i] +
                                                   " | Result: " + result);
                        }
                    }
                }

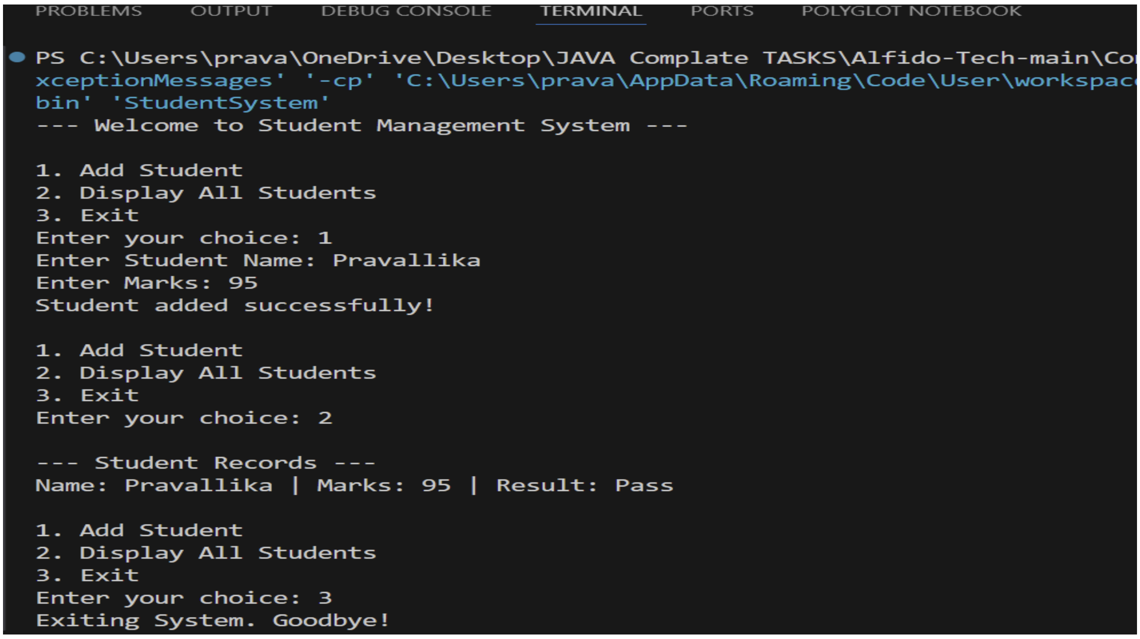
                else if (choice == 3) {
                    System.out.println(x: "Exiting System. Goodbye!");
                    break;
                }

                else {
                    System.out.println(x: "Invalid choice! Please try again.");
                }
            }

            sc.close();
        }
}
```

Figure 1: StudentSystem.java Source Code

Output :



```
PROBLEMS    OUTPUT    DEBUG CONSOLE    TERMINAL    PORTS    POLYGLOT NOTEBOOK

xceptionMessages' '-cp' 'C:\Users\prava\AppData\Roaming\Code\User\workspac
bin' 'StudentSystem'
--- Welcome to Student Management System ---

1. Add Student
2. Display All Students
3. Exit
Enter your choice: 1
Enter Student Name: Pravallika
Enter Marks: 95
Student added successfully!

1. Add Student
2. Display All Students
3. Exit
Enter your choice: 2

--- Student Records ---
Name: Pravallika | Marks: 95 | Result: Pass

1. Add Student
2. Display All Students
3. Exit
Enter your choice: 3
Exiting System. Goodbye!
```

Figure 2: BankSystem Output

Conclusion :

This task helped me understand how to build console-based Java applications using Scanner, loops, and conditional statements.
