

ALFIDO TECH INTERNSHIP

Task 4: File Handling & Basic Git Usage

Submitted By: Pravallika Eichapuram

Internship: Java Developer Internship

Task Number: 4

Date: 06 July 2026

Objective :

The objective of this task is to learn Java file handling using FileReader and FileWriter classes. It also demonstrates reading from and writing to text files while understanding the basics of Git and GitHub for project management.

Programs Implemented :

File Handling :

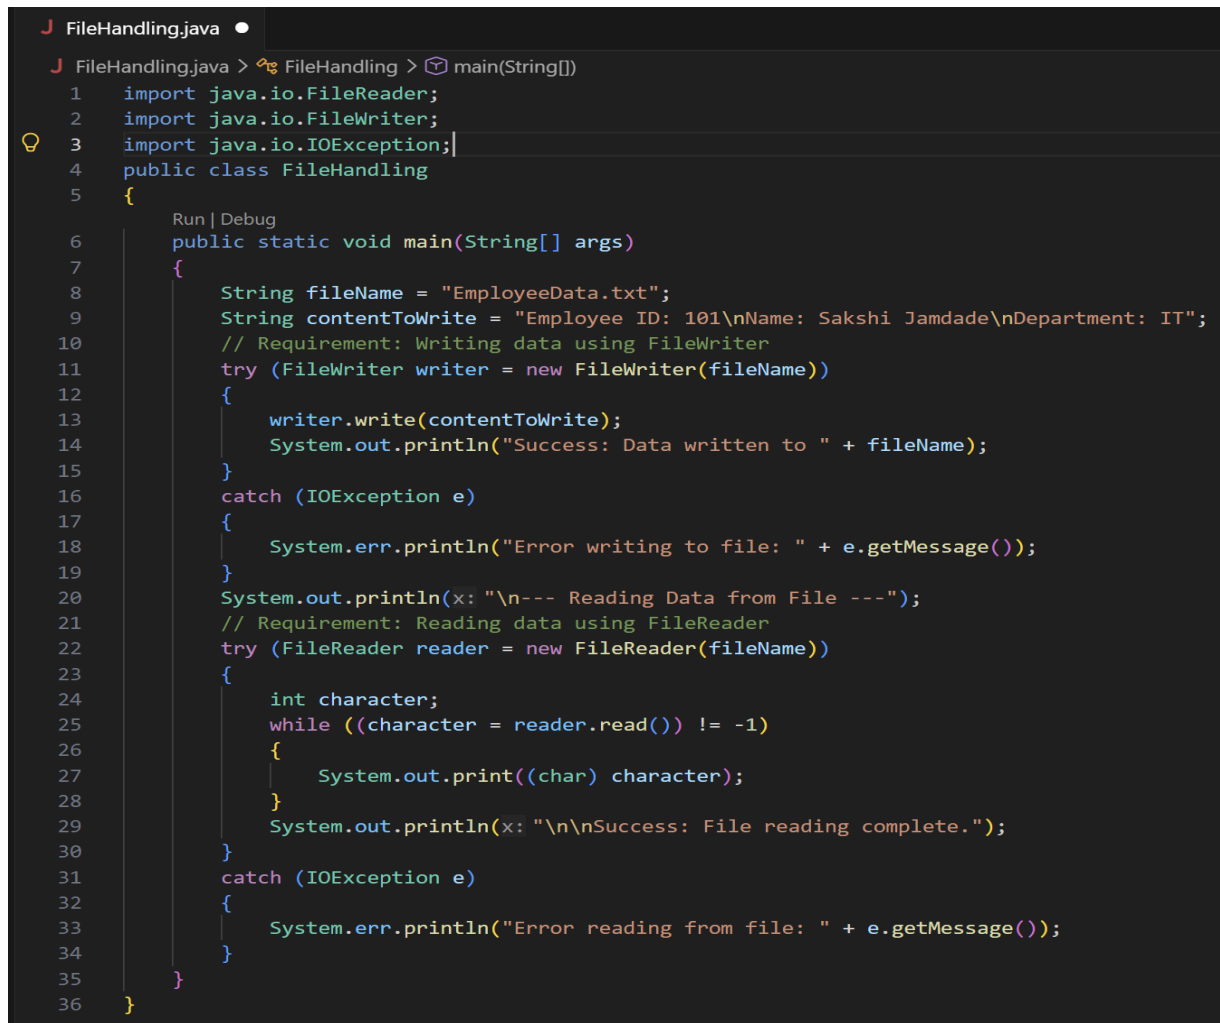

Description :

This program writes student information to a text file using FileWriter and then reads the same file using FileReader. Exception handling is implemented using a try-catch block to safely handle input/output errors.

Features :

- Uses FileWriter to write data into a file.
- Uses FileReader to read data from a file.
- Demonstrates Java file handling.
- Uses try-catch for exception handling.
- Displays the file contents on the console.

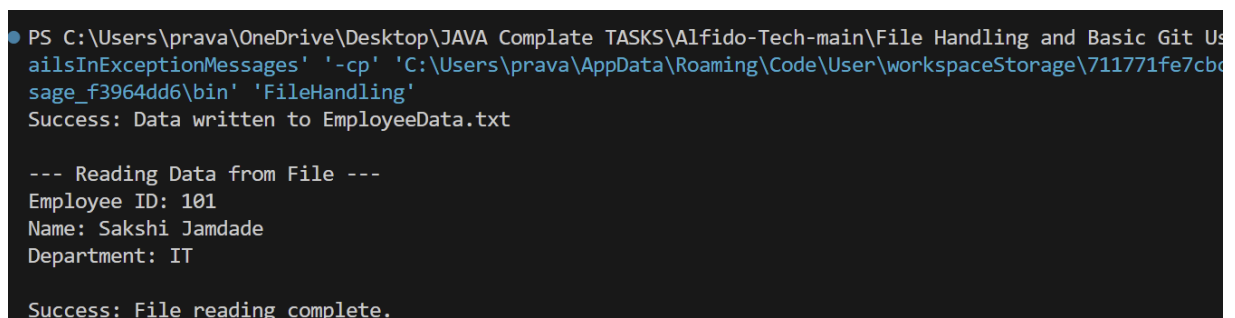

Source Code :

```
1 import java.io.FileReader;
2 import java.io.FileWriter;
3 import java.io.IOException;
4 public class FileHandling
5 {
6     public static void main(String[] args)
7     {
8         String fileName = "EmployeeData.txt";
9         String contentToWrite = "Employee ID: 101\nName: Sakshi Jamdade\nDepartment: IT";
10        // Requirement: Writing data using FileWriter
11        try (FileWriter writer = new FileWriter(fileName))
12        {
13            writer.write(contentToWrite);
14            System.out.println("Success: Data written to " + fileName);
15        }
16        catch (IOException e)
17        {
18            System.err.println("Error writing to file: " + e.getMessage());
19        }
20        System.out.println(x: "\n--- Reading Data from File ---");
21        // Requirement: Reading data using FileReader
22        try (FileReader reader = new FileReader(fileName))
23        {
24            int character;
25            while ((character = reader.read()) != -1)
26            {
27                System.out.print((char) character);
28            }
29            System.out.println(x: "\n\nSuccess: File reading complete.");
30        }
31        catch (IOException e)
32        {
33            System.err.println("Error reading from file: " + e.getMessage());
34        }
35    }
36 }
```

Figure 1: FileHandling.java Source Code

Output :

```
PS C:\Users\prava\OneDrive\Desktop\JAVA Complate TASKS\Alfido-Tech-main\File Handling and Basic Git Us
ailsInExceptionMessages' '-cp' 'C:\Users\prava\AppData\Roaming\Code\User\workspaceStorage\711771fe7cb0
sage_f3964dd6\bin' 'FileHandling'
Success: Data written to EmployeeData.txt

--- Reading Data from File ---
Employee ID: 101
Name: Sakshi Jamdade
Department: IT

Success: File reading complete.
```

Figure 2: FileHandling Output

Conclusion :

This task helped me understand how to perform file handling in Java using FileReader and FileWriter. It also improved my understanding of exception handling and using GitHub to manage and submit Java projects.
